1. **Sustainability at Deutsche Bank**

In alignment with our purpose, sustainability and the underlying sustainability principles are part of Deutsche Bank’s Code of Conduct. The following sustainability principles are at the core of our business and emphasise the bank’s commitment to environmental and social responsibility:

- We commit to balancing economic success with environmental and social responsibility;
- We identify and address the environmental and social impacts of our business activities;
- We foster business that enables sustainable growth;
- We are guided by internationally recognized principles and standards;
- We ensure that our sustainability strategy is firmly grounded in robust governance, policies and processes;
- We encourage transparent communication and open dialogue with stakeholders.

Furthermore, Deutsche Bank has clearly demonstrated its commitment to sustainability by setting an ambitious target of facilitating €200bn in ESG financing plus its portfolio of sustainable investments by 2025. The bank follows internationally recognized principles for sustainable business and banking, such as the UN Global Compact, the UN Principles for Responsible Investments and the UN Guiding Principles on Business and Human Rights.

2. **Sustainable Finance Framework**

2.1. **Introduction**

The Sustainable Finance Framework (“the Framework”) outlines the methodology and associated procedures to be applied to classify financial products and services offered by Deutsche Bank as sustainable finance. It specifies the classification logic, the eligibility criteria, the applicable environmental and social due diligence requirements and the verification process for sustainable finance. Further, reporting principles and requirements are outlined.

The Framework aims to establish a consistent and comprehensive methodology for the classification and reporting of financial products and services as sustainable. It further serves as a basis for defining targets and metrics for sustainable finance to deliver on the Deutsche Bank’s commitment to support sustainable economic growth and the transition to a low-carbon economy. It is dynamic in its nature, and will be regularly reviewed and expanded as required to amend or add additional qualifying activities and/or criteria, and to fulfil upcoming regulatory requirements under the EU Taxonomy Regulation.

For investment products, a complementary ESG framework for the classification of the investments products as sustainable/ESG products will be applied.

Capitalised terms have the meaning ascribed to them in section 3.

2.2. **Classification logic**

Sustainable finance is broadly defined as any form of financial product/service that promotes positive environmental and/or social (ES) purposes while contributing to the achievement of the Paris Agreement goals and Sustainable Development Goals (SDGs). Deutsche Bank defines six guiding principles for the classification of economic activities as environmentally and/or socially sustainable.
Principles for environmental sustainability
1. Climate change mitigation and adaptation:
   Economic activities enabling, directly or indirectly, a substantial reduction of GHG emissions and/or increase of energy efficiency. Measures adapting to acute and chronic physical risks caused or intensified by climate change.
2. Protection, restoration and promotion of natural resources and healthy ecosystems:
   Protection of marine and terrestrial [living] resources including water, critical and high-carbon stock ecosystems, and other primary resources. Restoration of biodiversity and ecosystems. Pollution protection and control and general reduction of resource use.
3. Transition to a circular economy:
   Prevention of waste and promotion of recycling and reuse of material.

Principles for social sustainability
1. Respect for human rights:
   Respect for, protection and enablement of basic human rights, e.g. food provision, labour protection.
2. Enabling living conditions:
   Access to affordable housing and infrastructure for transportation, ICT, and energy provision.
3. Access to essential services:
   Inclusive access to health, education, and financial services.

Under this framework, any financing (including but not limited to asset-based lending, corporate-level lending, trade finance as well as Capital Markets instruments including but not limited to all forms of certified sustainability-linked loans or sustainability linked hedging or other instruments) can be classified as sustainable finance. Deutsche Bank defines three parameters based on which a transaction can be classified:
(1) Use of proceeds,
(2) Company profile and/or
(3) Financial product in itself.

If one of the three parameters contributes to the achievement of the Paris Agreement goals and SDGs and is in line with Deutsche Bank’s principles for environmental and social sustainability outlined above, a transaction can be classified as sustainable finance.

EU Taxonomy Regulation
Our ambition is to align this framework to the extent possible with the requirements of the EU Taxonomy Regulation. Specifically, we will
- Consider, as far as feasible, technical screening criteria formulated by the EU Taxonomy for climate mitigation and adaption, especially for parameters 1) use of proceeds and 2) company profile;
- Start evaluating any gaps between the requirements of the Do No Significant Harm (DNSH) assessment and alignment with social minimum safeguards under the EU Taxonomy and our internal environmental and social due diligence approach.

Our existing due diligence requirements are based on the international standards listed in the Taxonomy Regulation, e.g. the UN Guiding Principles on Business and Human Rights. We aim to close any gaps we identify as we develop our framework. Equally, we will continue developing our internal framework to fully embed the technical screening criteria developed by the EU into our internal classification process.
The simplified classification logic and application process is outlined below:

**Classification logic**

1. **Parameter 1: Use of proceeds**
   - Do use of proceeds link to a dedicated economic activity/project?
     - Yes
     - No

2. **Parameter 2: Company profile**
   - Is the use of proceeds compliant with the environmental or social eligibility criteria?\(^1\)
     - Yes
     - No
   - Does the company derive 90% of revenues from activities defined as sustainable under this framework?\(^2\)
     - Yes
     - No

3. **Parameter 3: Product**
   - Is it a sustainability-linked product?
     - Yes
     - No

Has the Environmental & Social Due Diligence (ES DD) been passed successfully?\(^2\)

- Yes
- No

Classification as 'sustainable finance' possible

---

1) The eligibility criteria are aligned on the best effort basis with the EU Taxonomy and the internationally acknowledged principles e.g. ICMA Social and Green Bond Principles for the classification of economic activities. In the mid- to long term, DB aims to capture in full the thresholds set in the EU Taxonomy.

2) Transaction/client profile undergoes a ES DD either as required per DB ES Risk Framework, or on a best effort basis for low risk sectors. In the mid- to long term, DB aims to transition to a DNSH assessment that is fully compliant with the requirements set in the EU Taxonomy.

### 2.3. Eligibility parameter

#### 2.3.1. Parameter 1 – Use of proceeds

Where a dedicated use of proceeds can be determined, environmental and social criteria will be applied to classify whether the underlying economic activities are deemed sustainable. There are two basic considerations: Firstly, activities helping to sustain, improve and protect the environment, and secondly, activities enabling social development, especially in marginalized target groups.

The criteria for classification of activities as environmentally sustainable (Table 1) follow existing recognised international market standards and practices, e.g. the ICMA Green Bond Principles, and where feasible link to the technical screening criteria developed by the EU Taxonomy.

Social criteria (Table 2) are defined in accordance with the ICMA Social Bond Principles. As the overall understanding of environmental and social matters evolves and work on the EU Taxonomy continues, the criteria outlined in the Tables 1 and 2 may require modification. We will update our classification criteria according to periodical changes in the market approach and to the EU Taxonomy, and in adherence to our internal processes, including as outlined under sections 2.4. and 2.5 respectively (Environmental and Social due diligence requirements and verification process).

1 Table maps SDGs to industrial sectors based on a high likelihood to contribute positively to the global indicators for the Sustainable Development Goals and targets of the 2030 Agenda for Sustainable Development. This mapping is not exhaustive but directive. Single transactions may contribute to further SDGs if a positive contribution to the respective indicators of an SDG is achieved. The “Global indicator framework for the Sustainable Development Goals and targets of the 2030 Agenda for Sustainable Development” with a list of all SDGs and their indicators will be used as guidance.

\(^3\) Consideration should be given to the viability of ‘green’ or ‘nature-based’ solutions over ‘grey’ measures to address adaptation.
### Socially sustainable activities

Deutsche Bank defines social activities in accordance with the ICMA Social Bond Principles (SBP). Here, eligible activities are defined as directly addressing or mitigating a specific social issue and/or seek to achieve positive social outcomes especially, but not exclusively, for socially disadvantaged groups. Socially disadvantaged groups are defined as populations that are excluded in their local society for reasons that may be tied to age, sex, disability, race, ethnicity, origin, religion, economic or other status.

The below table outlines economic activities that are eligible for a classification as sustainable finance. Impact indicators are used to capture the tangible social change facilitated by sustainable finance and should be of quantitative nature where possible.

#### Table 2 – Socially sustainable activities

|                             |                                                                                  | • Number of new accounts opened in underserved areas  
|                             |                                                                                  | • Number of products aimed at financial inclusion  
|                             |                                                                                  | • Number of applicants for products targeted at underserved populations  
|                             |                                                                                  | • Number of financial literacy initiatives put into place  
|                             |                                                                                  | • Number of beneficiaries/participants of financial literacy initiatives  
| **Food security**            | • Investments aiming to enhance agricultural productivity  
|                             | • Extension of sustainable farming practices/sustainable land use                  | • Output per hectare from environmentally sustainable production  
|                             |                                                                                  | • Water required per kg of output  
|                             |                                                                                  | • Number of people with affordable access to safe, nutritious and sufficient food |

If a transaction/use of proceeds is aimed at a target population not included in the list set out in this policy, or contributes significantly to one of the three principles for social sustainability outlined in section 2.2, eligibility for classification as sustainable finance can be assessed on a case-by-case basis by Group Sustainability.
2.3.2. Parameter 2 – Company profile
If the use of proceed is not specified or dedicated to facilitate a certain activity (e.g., general corporate purposes), eligibility of a transaction for classification as sustainable finance will be assessed on the basis of the company profile. Transactions are eligible if the company

1. derives ≥ 90% of its revenues from activities eligible under section 2.3.1; and
2. is not involved in any activities excluded under section 2.4.

2.3.3. Parameter 3 – Sustainability-linked products
Deutsche Bank facilitates the development of innovative sustainable finance solutions incentivizing its clients’ commitment to sustainability and to support environmentally and socially sustainable economic activity and growth.

Sustainability-linked products are financial instruments that cannot be classified based on their use of proceeds as per the defined categories in section 2.3.1. Their structure is based on pre-determined overall or specific sustainability performance targets (SPTs). SPTs need to be

- ambitious;
- material for clients’ business and core economic activities; and
- compliant with the core principles for environmental and social sustainability outlined in section 2.2.

Underlying KPIs for the SPT should address the key sector-specific ESG challenges faced by a client and its industry in a holistic way and be linked to the client’s overall sustainability and/or transition strategy if available. SPTs should be verifiable and reported regularly by the client. Preferably, they should be measured or audited by a recognized and reputable external provider. This could be an ESG rating, a certification or a second-party opinion. Where applicable, specific sustainability-linked products should further adhere to recognized industry standards such as the LMA Green Loan Principles and Sustainability Linked Loan Principles or the ICMA Green Bond Principles and Social Bond Principles.

The final validation for new structures for sustainability-linked products issued under this Sustainable Finance Framework will be carried out by Group Sustainability taking market standards into consideration.
2.4. Exclusion criteria and environmental and social due diligence

In order to confirm that any transaction classified as sustainable finance does not have material negative environmental and/or social impacts, an ES due diligence (ES DD) will be conducted. For clients in high or enhanced ES risk sectors, the respective assessment procedure follows the ES Risk assessment as outlined in the Deutsche Bank Environmental and Social (ES) Policy Framework. For sectors that are currently not in the scope of Deutsche Bank’s ES Policy Framework, ES DD will be conducted by business and by Group Sustainability on a best effort basis. In the future, the objective is to align the existing ES DD approach with the EU Taxonomy requirements in regard to the Do No Significant Harm assessment and social safeguards.

2.5. Verification process

Eligible sustainable finance activities as defined by this Framework will be reviewed and validated continuously following a three-step verification process: (1) Front-office representatives will identify sustainable transactions, products or companies for each business activity in their area of responsibility and conduct a preliminary ES assessment; (2) dedicated Business Reviewers who have been nominated by the business divisions will perform sanity checks on classified cases; and (3) Group Sustainability verifies each transaction and conducts a second-party ES DD check. In case of an escalation with respect to the classification as sustainable finance, e.g. due to issues identified through the ES assessment process, the appropriate Reputational Risk Committee may be involved as an ultimate decision body.

As described in the Reputational Risk Policy, throughout the life-cycle of a product, continuous compliance with all relevant criteria will be monitored. Any identified non-compliance will be addressed and resolved or results in de-classify of the transaction.
