Target definition

Target definition excludes significant gains (such as gains from the sale of industrial holdings, businesses or premises) or charges (such as charges from restructuring, goodwill impairment or litigation) if they are not indicative of the future performance of our core businesses. All our targets will be tracked on this basis.

Income (loss) before income taxes attributable to Deutsche Bank shareholders (target definition): Income (loss) before income taxes less minority interest adjusted for significant gains (net of related expenses) and significant charges.

Net income (loss) attributable to Deutsche Bank shareholders (basis for target definition EPS): Net income (loss) attributable to Deutsche Bank shareholders adjusted for the post-tax effect of significant gains and charges and significant tax effects.

Return on equity (RoE)

Average Active Equity: We calculate active equity to make it easier to compare us to our competitors and we refer to active equity for several ratios. However, active equity is not a measure provided for in IFRS and you should not compare our ratios based on average active equity to other companies' ratios without considering the differences in the calculation. The items for which we adjust the average shareholders' equity are average unrealized net gains (losses) on financial assets available for sale and on cash flow hedges (both components net of applicable taxes), as well as average dividends, for which a proposal is accrued on a quarterly basis and for which payments occur once a year following the approval by the general shareholders' meeting.

Pre-tax return on average shareholders' equity: Income (loss) before income taxes attributable to Deutsche Bank shareholders (annualized), which is defined as IBIT less minority interest, as a percentage of average shareholders' equity.

Pre-tax return on average active equity: Income (loss) before income taxes attributable to Deutsche Bank shareholders (annualized), which is defined as IBIT less minority interest, as a percentage of average active equity.

Pre-tax return on average active equity (target definition): Income (loss) before income taxes attributable to Deutsche Bank shareholders according to target definition (annualized), which is defined as pre-tax income (loss) less minority interest, significant gains and charges, as a percentage of average active equity.

Earnings per share (EPS)

Diluted earnings per share: Net income (loss) attributable to Deutsche Bank shareholders, which is defined as net income (loss) less minority interest, after assumed conversions, divided by weighted average of diluted shares outstanding.

Diluted earnings per share (target definition): Net income (loss) attributable to Deutsche Bank shareholders (basis for target definition EPS), which is defined as net income (loss) less minority interest, post-tax effect of significant gains/charges and significant tax effects, after assumed conversions, divided by weighted average of diluted shares outstanding.

Cost ratios

Cost/income ratio: Noninterest expenses as a percentage of total net revenues, which is defined as net interest income before provision for credit losses plus noninterest income.

Compensation ratio: Compensation and benefits as a percentage of total net revenues, which is defined as net interest income before provision for credit losses plus noninterest income.

Noncompensation ratio: Noncompensation noninterest expenses, which is defined as total noninterest expenses less compensation and benefits, as a percentage of total net revenues.

Other key ratios

Book value per basic share outstanding: Book value per basic share outstanding is defined as shareholders' equity divided by the number of basic shares outstanding (both at period end).
