Deutsche Bank's financial data in this document have been prepared under IFRS.

Due to rounding, numbers presented throughout this document may not add up precisely to the totals we provide and percentages may not precisely reflect the absolute figures.

All segment figures reflect segment composition as of 31 December 2012.

1 Segment assets represent consolidated view, i.e. the amounts do not include intersegment balances.

2 Risk weighted assets starting December 2011 are based upon Basel 2.5 rules; prior periods are based upon Basel 2.

3 Includes Corporate Banking & Securities, Global Transaction Banking, Asset & Wealth Management, Private & Business Clients and Consolidation & Adjustments.

4 Starting 2012 the Group derives internal demand for regulatory capital assuming a Core Tier 1 ratio of 9.0% (previously based on a Tier 1 ratio of 10%). For details please refer to definition on page 18 and 19. Average active equity for 2011 was adjusted accordingly.

5 Numbers changed after preliminary disclosure at 13 December 2012 due to refinements in netting and consolidation adjustments between NCOU and the Core businesses (without impact on DB Group).

1 Includes revenues from Postbank since consolidation on December 3, 2010.

2 The impact of releases of certain allowances relates to loan loss allowances which were established by Postbank prior to change of control.

Releases of such allowances reduce provision for credit losses in Postbank's stand-alone financial statements. At the consolidated level of DB Group / PBC, these releases lead to an increase in interest income (because the underlying loans were consolidated at their respective fair value at change of control).

3 Reflects compensation and benefits of front office employees and allocated compensation and benefits of related Infrastructure functions (allocation on a pro forma basis).

4 Reflects front office employees and related Infrastructure employees (allocated on a pro forma basis).

5 Segment assets represent consolidated view, i.e. the amounts do not include intersegment balances.

6 Risk weighted assets starting December 2011 are based upon Basel 2.5 rules; prior periods are based upon Basel 2.

7 Starting 2012 the Group derives internal demand for regulatory capital assuming a Core Tier 1 ratio of 9.0% (previously based on a Tier 1 ratio of 10%). For details please refer to definition on page 18 and 19.

Average active equity for 2011 was adjusted accordingly.

8 Includes costs related to Postbank integration.

9 Mainly Postbank (incl. PPA, noncontrolling interest and other transaction-related components).

¹ Regulatory capital amounts, risk weighted assets and capital ratios starting December 2011 are based upon Basel 2.5 rules; prior periods are based upon Basel 2.

² Excludes transitional items pursuant to section 64h (3) German Banking Act.

³ All figures for 1-day holding period, 99% confidence level.

⁴ Amounts refer to the time period between January 1st and the end of the respective quarter.

⁵ Considers all trading exposures including Sal. Oppenheim and BHF. The Postbank value-at-risk is presented below.

⁶ Postbank trading book value-at-risk is presented since consolidation on December 3, 2010 only. For the 4th quarter 2010 the average, maximum and minimum value-at-risk had no material variance for the period since consolidation.

¹ Excluding actuarial gains (losses) related to defined benefit plans, net of tax.

Definition of certain financial measures

Profitability ratios

Return on average shareholders' equity (post-tax): Net income attributable to Deutsche Bank shareholders (annualized) as a percentage of average shareholders' equity.

Pre-tax return on average shareholders' equity: Income (loss) before income taxes attributable to Deutsche Bank shareholders (annualized), which is defined as IBIT excluding pre-tax noncontrolling interests, as a percentage of average shareholders' equity.

Pre-tax return on average active equity: Income (loss) before income taxes attributable to Deutsche Bank shareholders (annualized), which is defined as IBIT excluding pre-tax noncontrolling interests, as a percentage of average active equity.

Average Active Equity: We calculate active equity to make comparisons to our competitors easier and we refer to active equity for several ratios. However, active equity is not a measure provided for in IFRS and you should not compare our ratios based on average active equity to other companies' ratios without considering the differences in the calculation. The items for which we adjust the average shareholders' equity are average accumulated other comprehensive income (loss) excluding foreign currency translation (all components net of applicable taxes), as well as average dividends, for which a proposal is accrued on a quarterly basis and which are paid after the approval by the Annual General Meeting following each year. Tax rates applied in the calculation of average active equity are those used in the financial statements for the individual items and not an average overall tax rate. In the first quarter of 2011 the Group changed the methodology used for allocating average active equity to the business segments. Under the new methodology economic capital as basis for allocation is substituted by risk weighted assets and certain regulatory capital deduction items. All other items of the capital allocation framework remain unchanged.

The total amount allocated is determined based on the higher of the Group's overall economic risk exposure or demand for regulatory capital. Starting 2012 the Group derives its internal demand for regulatory capital assuming a Core Tier 1 ratio of 9.0 %, reflecting increased regulatory requirements (previously this was calculated based on a Tier 1 ratio of 10%, however all periods 2011 have been restated to reflect the new methodology). As a result, the amount of capital allocated to the segments has increased. If the Group's average active equity exceeds the higher of the overall economic risk exposure or the regulatory capital demand, this surplus is assigned to Consolidation & Adjustments.

Cost ratios

Cost/income ratio: Noninterest expenses as a percentage of total net revenues, which are defined as net interest income before provision for credit losses plus noninterest income.

Compensation ratio: Compensation and benefits as a percentage of total net revenues, which are defined as net interest income before provision for credit losses plus noninterest income.

Noncompensation ratio: Noncompensation noninterest expenses, which are defined as total noninterest expenses less compensation and benefits, as a percentage of total net revenues, which are defined as net interest income before provision for credit losses plus noninterest income.

Definition of certain financial measures (cont.)

Balance sheet leverage ratio

We calculate our leverage ratio as a non-GAAP financial measure by dividing total assets by total equity.

We disclose an adjusted leverage ratio for which the following adjustments are made to the reported IFRS assets and equity:

- Total assets under IFRS are adjusted to reflect netting provisions to obtain total assets adjusted. Under IFRS offsetting of financial assets and financial liabilities is required when an entity, (1) currently has a legally enforceable right to set off the recognised amounts; and (2) intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously. IFRS specifically focuses on the intention to settle net in the ordinary course of business, irrespective of the rights in default. As most derivative contracts covered by a master netting agreement do not settle net in the ordinary course of business they must be presented gross under IFRS. Repurchase and reverse repurchase agreements are also presented gross, as they also do not settle net in the ordinary course of business, even when covered by a master netting agreement. It has been industry practice in the U.S. to net the receivables and payables on unsettled regular way trades. This is not permitted under IFRS.
- Total equity under IFRS is adjusted to reflect pro-forma fair value gains and losses on our own debt (post-tax estimate assuming that substantially all our own debt was designated at fair value), to obtain total equity adjusted. The tax rate applied for this calculation is a blended uniform tax rate of 35%.

We apply these adjustments in calculating the adjusted leverage ratio to improve comparability with our competitors.

The definition of the adjusted leverage ratio is used consistently throughout our Group in managing the business. There will still be differences in the way our competitors calculate their leverage ratios compared to our definition of the adjusted leverage ratio. Therefore our adjusted leverage ratio should not be compared to other companies' leverage ratios without considering the differences in the calculation. Our adjusted leverage ratio is not likely to be identical to, nor necessarily indicative of, what our leverage ratio would be under any current or future bank regulatory leverage ratio requirement.

Other key ratios

Diluted earnings per share: Net income (loss) attributable to Deutsche Bank shareholders, which is defined as net income (loss) excluding noncontrolling interests, divided by the weighted-average number of diluted shares outstanding. Diluted earnings per share assume the conversion into common shares of outstanding securities or other contracts to issue common stock, such as share options, convertible debt, unvested deferred share awards and forward contracts.

Book value per basic share outstanding: Book value per basic share outstanding is defined as shareholders' equity divided by the number of basic shares outstanding (both at period end).

Tier 1 capital ratio: Tier 1 capital, as a percentage of the risk-weighted assets for credit, market and operational risk.

Common Equity Tier 1 capital ratio: Common Equity Tier 1 capital, as a percentage of the risk-weighted assets for credit, market and operational risk.
