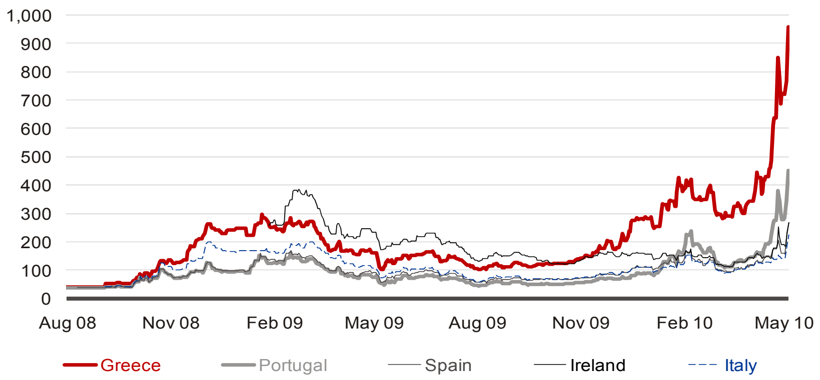
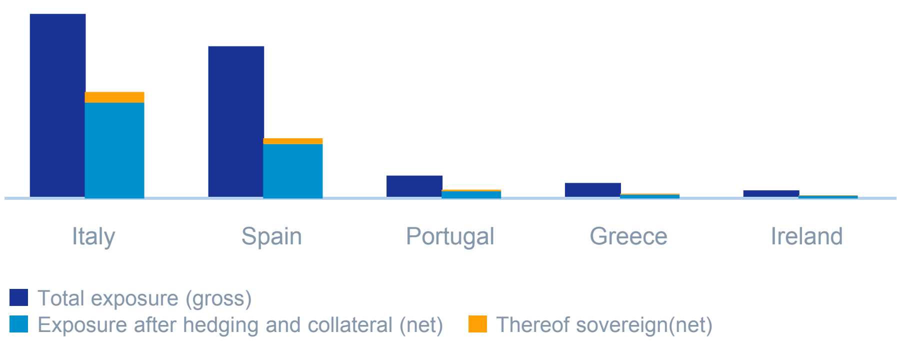
Sovereign risk

Concerns about sovereign risk – potential tertiary effect through contagion

CDS spreads by country (in bps)



DB exposures[1] by country, 31 Mar 2010



Limited primary/ secondary portfolio concerns…

- **Sovereign**: Overall relatively small, except Italy
- **CIB**: Focus on better rated clients; corporates / FIs with satisfactory diversification & risk mitigation
- **PBC**: Large presence in Spain and Italy, mitigated by low concentration risk and collateral

…but potential risk of tertiary market impact due to contagion

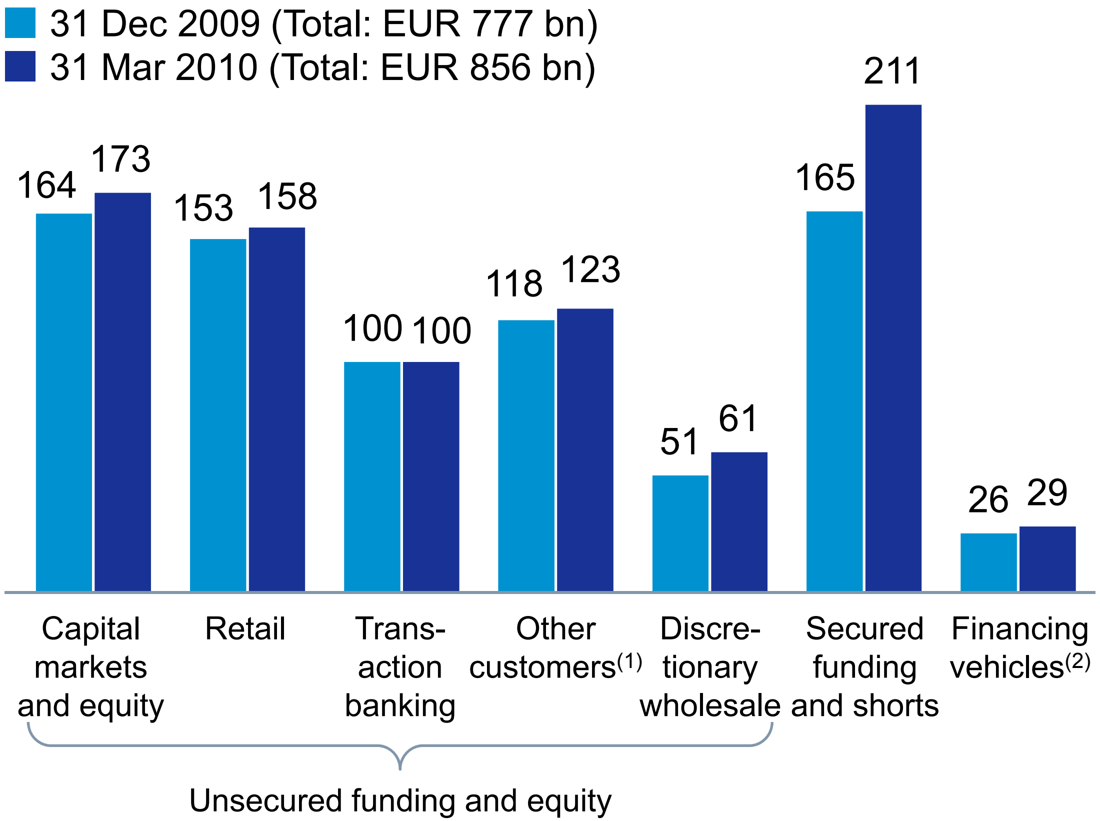
- Significant spread widening could lead to losses on our illiquid GM/GB legacy positions
- Temporarily reduced liquidity in EU debt and equity markets
- European banks with significant cross border funding would exhibit renewed stress

(1) Includes exposure for CIB, PBC and PWM, excludes traded credit positions (TCP)

Modest reliance on shorter term wholesale funding

In EUR bn

Funding sources overview



Note: Figures may not add up due to rounding differences

(1) Other includes fiduciary, self-funding structures (e.g. X-markets), margin / Prime Brokerage cash balances (shown on a net basis)

(2) Includes ABCP conduits

Liquidity position

- Secured funding increase mainly against highly liquid trading assets
- Incremental discretionary wholesale funding more than offset by increase of available cash balances
- Available cash and strategic liquidity reserve exceed net funding gap under combined stress scenario
- YTD execution of 2010 issuance volume well ahead of plan (>50% of EUR 19 bn plan)

Key takeaways

Well-capitalized	— Significant capital buffer; above targets — Future retained earnings potential — Fresh capital for buying new earnings streams (only)
Strong liquidity / funding	— Substantial liquidity reserve — Diverse unsecured funding base
Clear achievable goals	— Profit growth of core businesses — Infrastructure efficiency gains

In all aspects: positioned to deliver on Phase 4
